

BENJAMIN LOCKWOOD

(989) 798-1865

blockwood@lssu.edu

5315 South Iva Road

St. Charles, MI 48655

OBJECTIVE

Current Mechatronics student seeking a full-time engineering position where I can apply my experience with CAD, electrical systems, robotics, 3D printing, product testing, and manufacturing to help develop reliable and practical engineering solutions.

CORE COMPETENCIES

- **Rapid Prototyping:** 3D printing, prototype development, printer setup, operation, maintenance, and troubleshooting
- **Manufacturing:** CAD modeling, CNC machining, GD&T, Fixture Design, and Industrial Controls
- **Programming:** Allen-Bradley and Siemens PLCs, FANUC, KUKA, UR, C++, C, Java, and Python

WORK EXPERIENCE

Design Engineering Internship

Exmark Manufacturing, Beatrice, NE

May 2026 – present

- Currently working on Roll Over Protection Systems to prevent users from running equipment in an unsafe configuration.

Hardware Engineering Co-Op

BOSS Snowplow, Iron Mountain, MI

January 2024 – January 2026

- Delivered a portable dealer programming box that improved firmware update capability for service teams by developing a bench-top tool to flash firmware onto BOSS electronic devices without requiring installation on a vehicle.
- Developed electrical test fixtures for snowplow and spreader systems, improving product validation and troubleshooting by building fixture hardware, creating electrical schematics, and supporting system-level electrical testing.
- Justified in-house 3D printing for rapid prototyping by performing cost analysis that showed prototype parts could be produced at a 90% or more lower cost than outsourced alternatives.

Engineering Intern

Fullerton Tool, Saginaw, MI

Summers 2022 & 2023

- Created CAD models of existing production cutting tools in Fusion 360 and AutoCAD to support digital documentation and tooling records.
- Developed 3D-printed tool holders to improve cutting tool wash finish by supporting proper tool orientation and spacing during the wash cycle.
- Supported cost reduction efforts by developing 3D-printed replacement collets for Delrin components that were cracking during the honing process.

EDUCATION

Lake Superior State University, Sault Ste. Marie, MI

Bachelor of Science in Mechatronics, Minor in Robotics Engineering – Pending December 2026

Associate Degree in Manufacturing Engineering Technologies

COMMUNITY SERVICE

Lake Superior State University Engineering House Treasurer

August 2025 – present

FRC Robotics, Hemlock High School - mentoring

August 2022 – present

Dickinson Trail Network - trail development

April 2024 – August 2025

INTERESTS

Cycling, fishing, skiing, archery, and tennis
